Enes Kaynakci

AI / Software Engineer

Ankara, Türkiye | tensorenes@gmail.com | linkedin.com/in/enes-kaynakci | github.com/ekaynac | tensorenes.com

Summary

AI-leaning full-stack engineer building LLM and agent pipelines and computer-vision systems on production microservices and modern web and mobile stacks. Bilkent University Information Systems graduate (2026).

Experience

Mega Bilgisayar **May 2026 – Present**
AI / Software Engineer *Ankara, Türkiye*
- Built a fully on-prem AI portal stack: an aggregating MCP gateway with per-identity tool catalogs (Nextcloud, TrueConf, SIMS) and a vLLM agent that retrieves an embedding-selected tool subset per turn, with confirmation-gated writes.
- Led an industrial-safety vision platform: zero-shot OWLv2 detection, ByteTrack tracking, and face anonymization emitting signed violation events, deployed on NVIDIA Jetson and RTX via TensorRT.
- Built Kütüphane, an open-source governed knowledge catalog and agent memory layer: every item carries its write-path provenance and model-use rights, agents propose over MCP, and only a person accepts, by passkey.

Mia Teknoloji **Feb 2025 – Jul 2025**
AI Intern, AI R&D *Ankara, Türkiye*
- Engineered end-to-end LLM agent pipelines using RAG, function calling, transformers, and embedding models.
- Delivered a production SQL-generation pipeline with a 3-tier fallback mechanism using OpenWebUI and local LLMs.
- Built a Turkish translation pipeline integrating Zemberek morphology for improved contextual accuracy.

Mega Bilgisayar **Jun 2024 – Aug 2024**
AI Solutions Team Intern *Ankara, Türkiye*
- Developed and deployed an industrial safety system using YOLOv5 and OpenCV on NVIDIA Jetson with TensorRT optimization.

Meturone (Fixed-wing UAV Team) **Sep 2021 – Sep 2023**
Computer Vision Team Member *Ankara, Türkiye*
- Teknofest International UAV Competition finalist (2021 and 2022); deployed FP16-quantized YOLOv5 on Jetson Xavier for real-time aerial perception and published an ~11,500-image UAV detection dataset for open-source use.

Projects

InfraMedic | *Python, LLMDAP, DSPy, SQLite*
- Safety-first diagnose-and-remediate appliance for heterogeneous infrastructure, with an on-prem LLM analyst.
- Deny-by-default policy gate, saga-based remediation, and purpose-bound secret leases with TTL and a full audit trail.

Unattended Coding Agents — Auto Dev Cycle → nöbetçi-mcp | *Python, Go, MCP, vLLM* **Code**
- Three generations of an unattended coding loop, each measured honestly: build, gate, independent review, merge.
- Shipped 24 InfraMedic tasks (59 PRs) in 19 days at ~$2 builder cost each; stopped the Go rewrite when measurement showed plain agent loops did as well 14x faster.

LLMDAP — LLM Directory-bound Access Protection | *TypeScript, Node.js, Casbin, LDAP/Active Directory*
- Sovereign LLM-agent identity, memory protection, and audited gateway bound to AD/LDAP or OIDC.
- Per-identity envelope encryption, deny-by-default Casbin, and a signed hash-chained audit trail, fully on-prem through v2.0.

SIMS — Smart Inventory Management System | *PHP, Laravel, Node.js, Fastify*
- 10-microservice inventory platform with an MCP-powered AI assistant (graduation project).
- 10 microservices across 4 languages with per-service databases and a Redis event bus.

Homelab — Proxmox Platform | *Proxmox VE, ZFS, LXC, Cloudflare Tunnel*
- Infrastructure-as-documentation home server with GPU containers and zero open ports.
- GPU-enabled unprivileged containers, tested backups, and public services over Cloudflare Tunnel with zero forwarded ports.

Technical Skills

Languages: Python, TypeScript, JavaScript, PHP, Java, C, Dart, Kotlin

AI & ML: LLM Pipelines, RAG, Agents, MCP, Transformers, Embeddings, vLLM, PyTorch, OpenCV, TensorRT, OWLv2

Web & Mobile: React, Next.js, React Native (Expo), Node.js, Express, Fastify, FastAPI, Laravel, Strapi, Socket.io, Tailwind CSS, Vite

Infrastructure & Tools: Docker, Proxmox VE, Nginx, PostgreSQL, MySQL, Redis, LDAP/OIDC, Cloudflare Tunnel, Tailscale

Education

Bilkent University, B.Sc. in Information Systems and Technologies, Ankara, Türkiye, Aug 2022 – Jun 2026

FH Upper Austria, Hagenberg Campus, Erasmus Exchange Student, Hagenberg, Austria, Oct 2024 – Feb 2025

Middle East Technical University (METU), B.Sc. in Electrical-Electronics Engineering (transferred), Ankara, Türkiye, Sep 2018 – Jun 2021

Certifications

Deep Learning Specialization (DeepLearning.AI, 2020); Machine Learning, Stanford University (2023).

Awards

2nd Place, Autonomous UAV Computer Vision — 18th METU Robotics Days (2022); Teknofest UAV Finalist (2021 & 2022).

Leadership & Activities

Founder, Bilkent Game Development & Animation Society; President, Bilkent Literature Society; founding poetry editor at Polemik Yayınları; published poet (Uyandı Uyudu, 2024; Sarhoş, 2025).
